

**MMU's Certified PROFIBUS Installer Course – a few comments**

"Thanks Andy, I really enjoyed the course & I believe it was down to your excellent ability as a Lecturer. The Irish market could benefit from the PROFIBUS course"

Joe Furey, Lapp Ltd, Dublin

"Well run – Clear and relevant information delivered very well."

Craig Jones, LJ Monks Ltd

Andy

The feedback from the course was very good indeed all participants thought the course covered areas which will be of help in the installation and verification of installations in the future.

I have spoken about possibly doing the 3 day course in Manchester later in the year, although we would probably keep the numbers small perhaps to a maximum on 6 - 9 persons spread over 2 - 3 courses.

Thanks again for providing a very good course.

Regards

Dave Wardale, Vauxhall Cars

**Others, given anonymously on the questionnaires handed in after each course...**

"Fantastic, answered a lot of questions I had and has clearly defined my knowledge. Keen to learn more. Thank you."

"Very good, professionally run. Covered a very wide range of PROFIBUS systems. Well Done & Thanks."

"Excellent – learned a great deal."

"The way the course was laid out made it easy for me to follow even when it became technical."

"Excellent informative course. Well presented by a more than approachable lecturer. Very good all round."

"Enjoyable and educational. Helped me understand a great deal more about PROFIBUS. I feel confident that I could now investigate the BT200 and understand what I am doing."

"The course was very good and I now feel equipped to answer any queries which will arise in my employment. I got a lot of extra important info; the test tools, the repeater info, the issues regards earthing and classification of cable types. The theory on Reflection was also new to me."

"I'm glad I came on the course and I'll recommend it to the 'client' on my return to Ireland."

"A good grounding on the theory and practice of PROFIBUS installation."

"Good course, well taught. Very helpful to me for the future."

"Good – will send more employees!"

"Very good and well worth recommending to colleagues."

"Excellent. Many people think fieldbus systems can be "lashed together" by people with no appreciating of comms systems. Hopefully the course will make some people appreciate that fieldbus wiring is not a job for an untrained Sparky!!"

"Very well thought out and presented. The Presenter's enthusiasm for the topic shows and it is appreciated that he is keeping his knowledge current. I've attended many courses where Trainee's questions were answered with "I don't know" or "I'll find out." – Not so this course!"

"I would have no hesitation in recommending this course to "new" installers."

"

Very good, well presented and explained.

Very well organised and a good balance between practical and theory.

I learned a lot, it was well explained and at just about the right pace. The Practicals were useful and in the right place.

The Course was overall good; I thought it a great starting point for an Engineering Course.

**Comments from Masterfoods on-site course, 13 Jan 2005:**

Very well delivered – excellent instructor

Good course – steep learning curve!

Good course, but a lot to pack into one day!

I now feel reasonably confident in designing a simple PROFIBUS installation.

Very useful course giving an excellent introduction to PROFIBUS

Very good, although with no previous experience at times I found the course tough going.

.....

**Comments from Vauxhall Motors on-site courses 8 December 2004 and 1<sup>st</sup> & 2<sup>nd</sup> Feb 2005**

The best presented, most professional course I have ever been on in 14 years at Vauxhall Motors Ltd!

An excellent, basic introduction of the technicalities behind the operation of DP networks

Very good although there is a lot of subject matter to be covered in a short space of time.

Overall a worthwhile course. A good introduction to PROFIBUS with the benefit of being shown correct installation guidelines + practical.

Very good, informative and interesting.

Course well laid out, instructor was excellent, would like to continue on to the advanced course.

I found the course very useful and will help a lot for future installations & faults. – I would like to do the Engineer course.

Very good course for a basic understanding of fieldbus.

Very good.

Well run course, instructors' knowledge very good.

Good informative course, relevant topics, good instructor.

Very clear, concise and useful aimed at the information I will need in my work.

The course was most enlightening giving a broad overview of PROFIBUS. Although a lot of information it was well presented, at a good pace.
