Guideline
for PROFIBUS and PROFINET

Version 1.3 – Date January 2024
Order No.: 7.412
The attention of adopters is directed to the possibility that compliance with or adoption of PI (PROFIBUS & PROFINET International) specifications may require use of an invention covered by patent rights. PI shall not be responsible for identifying patents for which a license may be required by any PI specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. PI specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

NOTICE:

The information contained in this document is subject to change without notice. The material in this document details a PI specification in accordance with the license and notices set forth on this page. This document does not represent a commitment to implement any portion of this specification in any company's products.

WHILE THE INFORMATION IN THIS PUBLICATION IS BELIEVED TO BE ACCURATE, PI MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS MATERIAL INCLUDING, BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR PARTICULAR PURPOSE OR USE.

In no event shall PI be liable for errors contained herein or for indirect, incidental, special, consequential, reliance or cover damages, including loss of profits, revenue, data or use, incurred by any user or any third party. Compliance with this specification does not absolve manufacturers of PROFIBUS or PROFINET equipment, from the requirements of safety and regulatory agencies (TÜV, BIA, UL, CSA, etc.).

PROFIBUS® and PROFINET® logos are registered trademarks. The use is restricted to members of PROFIBUS & PROFINET International. More detailed terms for the use can be found on the web page www.profibus.com. Please select button "Presentations & logos".

In this specification the following key words (in bold text) will be used:

- **may**: indicates flexibility of choice with no implied preference.
- **should**: indicates flexibility of choice with a strongly preferred implementation.
- **shall**: indicates a mandatory requirement. Designers shall implement such mandatory requirements to ensure interoperability and to claim conformance with this specification.

1 Management Summary - Scope of this Document

This guideline documents the charges that are to be paid by the companies that apply for a Vendor ID as well as product related IDs or certificates.

2 Related documents and references

2.1 Related documents

Documents
- "Framework for Testing and Certification of PROFIBUS and PROFINET Products"

in their current versions.

2.2 References

None

3 Type of Charges

1. Vendor Registration: Vendor ID
2. Product Registration: Device ID (ID Number / Ident Number), only relevant to PROFIBUS with the exception of pure PA Profile Devices
3. MAC address range reservation: 4k MAC address range, only relevant to PROFINET (optional)
4. Product Certification, which is recommended for PROFIBUS, PROFIBUS PA Profile as well as, PROFiDrive and which is mandatory for PROFINET, PROFIenergy and PROFiSAFE
5. GSD Signing: In Class 1 of the PROFINET Security, a concept for signing GSD files for PROFINET was specified. The service is offered by the PI certification body.

3.1 Charges for Vendor ID

A Vendor ID is needed for any PROFIBUS and PROFINET device.
A Vendor ID is free of charge to members and non-members.

3.2 Charges for PROFIBUS Device ID (Ident Number)

As specified in the PROFIBUS guidelines, an Ident Number (ID number) is required for all PROFIBUS devices using PROFIBUS DP communication (except pure Master Class 2 devices). The ID number allows devices connected to the bus to be identified with a minimum amount of protocol overhead. In addition, the ID number is used to archive files which contain information on device features and configuration (so-called GSD files).

Table 1: Product registration charges

Remark: The Device Identification for PROFINET consists of the Vendor ID and a manufacturer-specific key (Device ID). The Vendor ID is assigned uniquely to a company. The Device ID is defined by the manufacturer specifically for the device.
3.3 Charges for PROFINET 4k MAC address range

Each PROFINET device is addressed using its globally unique MAC address. This MAC address consists of a company code (bits 24 ... 47) as an OUI (Organizationally Unique Identifier) and a consecutive number (bits 0 ... 23), which allows to identify up to 16,777,214 products. The OUI is assigned by the IEEE Standards Department to any company. PI has been granted the OUI 00-0E-CF. PI provides all device manufacturers, which do not want to apply for their own OUI, 4k-ranges of PI’s OUI. This service allows companies to acquire MAC addresses directly from the PI Support Center.

3.4 Charges for Product Certificates

Prerequisite for granting a certificate from the PI Certification Office is a positive Test Report issued from one of the accredited PI Test Labs.

</tr>
<tr>
<td>Profiles: PROFIsafe, PROFIdrive, Encoder, PROFIenergy, PA Profile</td>
<td>0 €</td>
<td>0 €</td>
<td>0 €*</td>
</tr>
</tbody>
</table>

Remark: The profile certificates require a PROFIBUS and/or PROFINET certificate. Details can be found in the documents “How to get a Certificate for a PROFIBUS device” or “How to get a Certificate for a PROFINET device”

The Certificates for unchanged products are valid for a period of 3 years. The certificate holders have to reapply for certification within 3 months after the validity expired. *) For certificate prolongations without test that are requested later than 3 months after expiry date, a Recovery Issue Fee of 300 € is due.

Remark: The certification charges/fees do not cover the costs for the test services of the accredited PI Test Labs.
3.5 Charges for GSD Signing Services

Class 1 security includes the signing of GSD files for PROFINET. The prerequisite for implementation is the extension of the GSDML specification to include an XML notation for describing the properties of a device. A signed GSD file ensures both its authenticity and its integrity.

A process has been defined for implementing the signing of GSD files of PROFINET products, for which the PI Certification Office is responsible. This enables all manufacturers of PROFINET devices to deliver the associated GSD file in signed form as a GSDX file.

The signing service is available in two variants:

1. Manufacturer-specific certificate:
   The PI Certification Office creates a manufacturer-specific certificate with a validity of 3 years which is delivered to the vendor. Based on this certificate, the vendor can sign GSD-Files himself using the tool provided.

2. GSD signing service:
   the PI Certification Office creates a manufacturer-specific certificate with a validity of three years, which remains in the PI Certification Office and is kept there securely.
   Via the GSD Signing Portal the manufacturer can place signing orders for individual GSD-Files.

Table 4: GSD signing charges

<table>
<thead>
<tr>
<th>Use Case</th>
<th>Member</th>
<th>Non-Member</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manufacturer Specific Certificate (incl. Smart card &amp; testing license) 3 years</td>
<td>900€ basic fee</td>
<td>3,600€ basic fee</td>
</tr>
<tr>
<td>GSD Signing Service Validity 3 years</td>
<td>1,900€ basic fee</td>
<td>760€ basic fee</td>
</tr>
</tbody>
</table>

The Certificates are valid for a period of 3 years. After expiration of the validity, the certificates must be renewed. This must be done by the manufacturer by placing a new order in the GSD Signing Portal.
