

# Become part of our network!

With its background spanning more than 20 years and with over 1400 member companies, PI is the world's leading organization for advancement of industrial communication.

## Professional marketing

As a member, you benefit from the professional marketing of PROFIBUS and PROFINET at national and international levels. Take advantage of the PI communication channels and its technology and community logos to enhance the market presence of your company. Through participation in events such as workshops and trade fairs, you can become highly visible as an active member of the PI community of PROFInetworkers.

## Knowledge sharing and participation in development activities

Our organization brings together the best minds of leading industrial companies. Knowledge sharing within our global network offers previously unimagined possibilities. Every member also has the chance to actively participate in the further development of PI technologies.

## Worldwide support for developers and users

As a member you have access to all technical documentation and specifications. With our community of regional representatives (RPAs), we are able to provide worldwide support for realizing advanced developments, training users and certifying products. Become a member and take full advantage of all of these benefits.

## Visit

### The best minds and the best technology

PROFIBUS & PROFINET International (PI) is the most influential interest group in the field of industrial communication. Our worldwide network includes vendors and users covering all industries. PROFIBUS – the leading fieldbus – and PROFINET – the leading Industrial Ethernet standard – are automation technologies for the future. Technological leadership enables our members to offer innovative and competitive products and solutions. PI, the network of PROFInetworkers, brings together the best minds and helps achieve innovative results. We network expertise, companies, and people - regionally and internationally.

### A network for greater progress

The dynamics and driving force of PI spring from the members who engage with our community of technology experts. The interaction of these members, each offering a different combination of skills and experience, is the basis of our success. Through them, advanced ideas become standards, standards lead to innovative products, and innovative products deliver powerful automation solutions.
